### DETAILED ACTION

1. Applicant's election of Group 1 (claims 1-17 and 35-40) in the reply filed on January 28, 2005 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Claims 28-34 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3, 5-7, 15, 16, 35, and 36 are rejected under 35 U.S.C. 102(b) as being anticipated by Crutchfield et al (4,365,018).

In claim 1, Crutchfield teaches an imaging element comprising a support member, a light sensitive imaging layer, and a light generating unit. Crutchfield also teaches (see claim 20) an imaging process, in which the light generating unit is activated first so that the light generating unit chemiluminesces, and the light sensitive imaging layer is image-wise exposed with the chemiluminescence generated from the light generating unit. Crutchfield teaches *applying a solution of hydrogen peroxide to the surface* of the light generating unit in order to activate the light generating unit (see col.9, lines 19-25 and Example 1). Crutchfield also teaches Therefore, Crutchfield

teaches present inventions of claims 1-3, 5-7, 15, 16, 35 and 36 (it is the Examiner's position that Crutchfield's step of applying a solution of hydrogen peroxide to the surface of the imaging element would inherently be capable of simulating photoactive properties on the surface and demonstrating hydrophilicity of the surface by exposing the surface to electromagnetic radiation having one or more wavelengths of visible light as presently recited in claims 1 and 15).

4. Claims 26 and 27 are rejected under 35 U.S.C. 102(b) as being anticipated by Sawai et al (US 6,258,969 B1).

Sawai teaches (see col.19, lines 54-64) that the polymethoxysiloxane obtained by his invention can be used as a *coating material*, which provides remarkable effects for example, in imparting a hydrophilic nature. Therefore, the prior art teaches present inventions of claims 26 and 27.

#### ***Allowable Subject Matter***

5. Claims 4, 8-14, 17-24, and 37-40 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Crutchfield'018 does not teach or suggest present titania surface of claims 4, 24, and 40. Crutchfield'018 does not teach or suggest present thickness range for the photoactive coating of claim 8. Crutchfield'018 does not teach or suggest present drying step of claim 9. Crutchfield'018 does not teach or suggest present step of applying at least partly hydrolyzed polyalkoxysiloxane material of claims 12, 17, and 38. Crutchfield'018 does not teach or suggest present photoactive material of claim 37.

6. Claim 25 is allowed. None of the cited prior arts teaches or suggests present method of 25.
